Application No.: 10/791,996 PATENT

Case No.: FA1013 US DIV

AMENDMENTS

IN THE CLAIMS:

Claims 1-10. (Canceled)

Claim 11. (Currently amended) A process comprising applying a multi-layer coating on a substrate wherein the substrate is an automotive body or part having a color-imparting and/or special effect-imparting base coat and a coating agent applied thereon as a transparent clear coat [using a coating agent] and curing said coating; wherein the coating agent contains resin solids comprising

- (a) 10 wt-% to 80 wt-% of a non-aromatic polyester polyol,
- (b) 0 wt-% to 70 wt-% of at least one constituent selected from the group consisting of hydroxyl-functional binders that are different from polyester polyol (a), hydroxyl-functional reactive thinners and combinations thereof, and
- (c) 20 wt-% to 60 wt-% of at least one cross-linking agent for the hydroxyl-functional components (a) and (b),

wherein the polyester polyol (a) is a branched structure having a calculated molecular mass from 600 to 1400, an acid value from 0 to 30 mg KOH/g and a hydroxyl value from 250 to 600 mg KOH/g with a calculated hydroxyl functionality from 4.5 to 10, and is composed of randomly positioned components consisting

- (a1) hydroxyl components comprising 0 wt-% to 20 wt-% of at least one diol and 80 wt-% to 100 wt-% of at least one polyol having 3 to 6 hydroxyl groups,
- (a2) carboxyl components comprising 0 wt-% to 20 wt-% of at least one monocarboxylic acid and 80 wt-% to 100 wt-% of at least one dicarboxylic acid, and optionally
- (a3) at least one hydroxycarboxylic acid component, the sum of the percentages by weight of components (a) to (c), of components (a1) and of components (a2) being 100% in each case.

Application No.: 10/791,996 . PATENT

Case No.: FA1013 US DIV

Claim 12. (Currently amended) A process for forming a coating layer as one coating layer of a multi-layer coating comprising:

applying to a substrate a coating layer comprising a coating agent and curing said coating layer, wherein the substrate is an automotive body or part having a color-imparting and/or special effect-imparting base coat and the coating agent applied thereon as a transparent clear coat;

wherein the coating agent contains resin solids comprising

- (a) 10 wt-% to 80 wt-% of a non-aromatic polyester polyol,
- (b) 0 wt-% to 70 wt-% of at least one constituent selected from the group consisting of hydroxyl-functional binders that are different from polyester polyol (a), hydroxyl-functional reactive thinners and combinations thereof, and
- (c) 20 wt-% to 60 wt-% of at least one cross-linking agent for the hydroxyl-functional components (a) and (b),

wherein the polyester polyol (a) is a branched structure having a calculated molecular mass from 600 to 1400, an acid value from 0 to 30 mg KOH/g and a hydroxyl value from 250 to 600 mg KOH/g with a calculated hydroxyl functionality from 4.5 to 10, and is composed of randomly positioned components consisting

- (a1) hydroxyl components comprising 0 wt-% to 20 wt-% of at least one diol and 80 wt-% to 100 wt-% of at least one polyol having 3 to 6 hydroxyl groups,
- (a2) carboxyl components comprising 0 wt-% to 20 wt-% of at least one monocarboxylic acid and 80 wt-% to 100 wt-% of at least one dicarboxylic acid, and optionally
- (a3) at least one hydroxycarboxylic acid component, the sum of the percentages by weight of components (a) to (c), of components (a1) and of components (a2) being 100% in each case.

Claim 13. (Canceled)

Claim 14. (Canceled)

PATENT

Application No.: 10/791,996 Case No.: FA1013 US DIV

Claim 15. (Canceled)

Claim 16. (Original) The process according to claim 12, wherein the polyester polyol

(a) comprises 30 wt-% to 60 wt-% of at least one hydroxyl component (a1),

30 wt-% to 70 wt-% of at least one carboxyl component (a2) and 0 wt-% to

10 wt-% of at least one hydroxycarboxylic acid component (a3).

- Claim 17. (Original) The process according to claim 12, wherein the hydroxyl component (a1) consists of at least one (cyclo)aliphatic polyol having 3 to 6 hydroxyl groups.
- Claim 18. (Original) The process according to claim 12, wherein the carboxyl component (a2) consists of at least one dicarboxylic acid.
- Claim 19. (Currently amended) The process according to claim 12, wherein the polyester polyol (a) comprises dimer [dimmer] fatty acid as one of at least two dicarboxylic acids of the carboxyl component (a2) corresponding to a weight ratio from 5 wt-% to 45 wt-% of dimer [dimmer] fatty acid and 55 wt-% to 95 wt-% of at least one additional dicarboxylic acid.
- Claim 20. (Original) The process according to claim 12, wherein the cross-linking agent (c) is selected from the group consisting of aminoplastic resins, free polyisocyanates, blocked polyisocyanates, transesterification cross-linking agents or combinations thereof.
 - Claim 21. (Currently amended) The process according to claim 12, wherein the coating agent selected from the group consisting of aqueous coating agents and coating agents based on organic solvents.
